DETAILED ACTION

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Information Disclosure Statement

The information disclosure statement filed June 29, 2004 fails to comply with 37 CFR 1.98(a)(3) because it does not include a concise explanation of the relevance, as it is presently understood by the individual designated in 37 CFR 1.56(c) most knowledgeable about the content of the information, of each patent listed that is not in the English language.

Since the submission appears to be *bona fide*, applicant is required to supply the above mentioned omissions or corrections in the information disclosure statement within the set period for reply to this Office action. Failure to timely comply with this notice will result in the above mentioned information disclosure statement being placed in the application file with the noncomplying information **not** being considered. See 37 CFR 1.97(i).

Drawings

Figures 8, 9A and 9B should be designated by a legend such as --Related Art-- because only that which is not the invention is illustrated. See MPEP § 608.02(g).

Art Unit: 3747

Corrected drawing sheets are required in reply to the Office action to avoid abandonment of the application. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 13 and 14 are rejected under 35 U.S.C. 102(b) as being anticipated by Kawasaki et al (US 2001/0047786 A1). A damper spring 15 is interposed between a rope reel 21 and a cam (pulley 31). Cam (pulley 31) has a recess to the extent claimed defined between the cylindrical mounting portion and the adjacent radially extending portion. The cam (pulley 31) has pawl openings as shown in Fig. 3.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

Art Unit: 3747

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 15 and 16 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kawasaki et al (US 2001/0047786 A1) in view of Uhl (US 5,287,832). Kawasaki et al discloses the claimed invention as stated above except for the cam having an outer peripheral support portion. Uhl teaches that it is known to provide an outer peripheral support portion between a rope reel 21 and a cam pulley as shown in Fig. 5. It would have been obvious to one having ordinary skill in the art at the time the invention was made to modify the recoil starter of Kawasaki et al so as to provide an outer peripheral support portion between the rope reel and the cam pulley, as taught by Uhl, in order to provide a stronger support structure.

Allowable Subject Matter

Claims 1-12 are allowed.
